

Inventory Management System

Admin Login & Security

- Login Form: A simple login page for the administrator to access the system.
- Route Protection: Users who are not logged in cannot access inventory data and must be redirected to the login page.
- Secure Passwords: Passwords will be securely stored in the database using hashing.

Dashboard

- Display summary information such as total products, total suppliers, and low stock items.

Product List Page

- Show all products in a clean table.
- Low Stock Alert: Highlight products in red when stock is below 5.
- Search & Filter: Search products by name and filter by supplier.

View Product Page

- Display complete product details including image, description, quantity, price, and supplier information.

Product Add & Edit Page

- Form fields: Name, Description, Price, Quantity, Supplier.
- Image Upload: Allow administrators to upload product images from their computer.

Supplier List Page

- Display all suppliers with Name, Contact Email, and Phone Number.

Supplier Add & Edit Page

- Form fields to create and update supplier information.

Validation

- Prevent negative values for price and quantity.
- Prevent submission of empty required fields.
- Display clear error messages for invalid input.

Technology

- HTML, CSS, JavaScript, and MySQL.
